compatibility. Before permanent installation, test the equipment with the chemicals and under the specific conditions of your application.

Chemical Compatibility Database from Cole- Parmer

Thermoplastics and elastomers have outstanding resistance to a wide range of chemical reagents. The

Download Ebook Chemical Resistance Guide

chemical resistance of plastic piping is basically a function of the thermoplastic material and the compounding components. In general, the less compounding components used the better the chemical resistance.

PVC is characterized by high physical properties and resistance to corrosion and chemical attack by acids, alkalies, salt solutions, and many other chemicals. It is attacked, however, by polar solvents such as ketones, some chlorinated hydrocarbons and aromatics. The maximum service temperature of PVC is 140°F.
