Controversy continues in the area of epidemiology, etiology, diagnosis, and management of temporomandibular disorders (TMD). The field is replete with testimonials and clinical opinion, but it has been lacking in scientific foundation.

Management of temporomandibular disorders: Concepts and ...

Temporomandibular disorders (TMD) are a collective term given to a number of clinical problems that involve the masticatory musculature, the temporomandibular joints and associated structures, or both. Although the aetiology of TMD has not been fully understood, in general it is considered to be multifactorial.

The classification of TMDs is also controversial. A diagnostic model was proposed in 1992, known as the Research Diagnostic Criteria for Temporomandibular Disorders (RDC/TMD) (4). Since its publication, the RDC/TMD has been widely used in epidemiological, clinical and experimental studies.

Temporomandibular disorders. A case-control study

TMJ disorders — a type of temporomandibular disorder or TMD — can cause pain in your jaw joint and in the muscles that control jaw movement. The exact cause of a person's TMJ disorder is often difficult to determine. Your pain may be due to a combination of factors, such as genetics, arthritis or jaw injury. Some people who have jaw pain also tend to clench or grind their teeth (bruxism), although many people habitually clench or grind their teeth and never develop TMJ disorders.
