solution to the equation $f(a) = b$, i.e. $a = f^{-1}(b)$ ($f(a) = b$ for all $a \in A, b \in B$). Let $\text{map}(A;B)$ denote the set of all maps from A to B . Then $\text{map}(X;A \times B) = \text{map}(X;A) \times \text{map}(X;B)$; $\text{map}(A \times B;X) = \text{map}(A;X) \times \text{map}(B;X)$ for all sets X, A , and B . Some people like to rewrite this as $\text{map}(X;A \times B) = \text{map}(X;(A;B))$; $\text{map}(A \times B;X) = \text{map}((A;B); X)$

Nowadays, studying general topology really more resembles studying a language rather than mathematics: one needs to learn a lot of new words, while proofs of most theorems are extremely ... solutions of the following equation" and write down the equation. This is a reasonable description of the set. At least, it is unambiguous.

0.2.6 Quotient Maps & Quotient Topology (1) We show that if $q: X \rightarrow Y$ is a quotient map, then the topology of Y is the largest which makes q continuous: Proof. Suppose that τ was some other topology on Y , such that q was continuous. We conclude by showing that $\tau \subseteq \tau_q$: Indeed; if $U \in \tau$, then $q^{-1}(U)$ is open in X . But then, $q^{-1}(U) \in \tau_q$. Thus ...

Topology has several different branches | general topology (also known as point-set topology), algebraic topology, differential topology and topological algebra | the rest, general topology, being the door to the study of the others. I aim in this book to provide a thorough grounding in general topology. Anyone who conscientiously

In mathematics, general topology is the branch of topology that deals with the basic set-theoretic definitions and constructions used in topology. It is the foundation of most other branches of topology, including differential topology, geometric topology, and algebraic topology. Another name for general topology is point-set topology.. The fundamental concepts in point-set topology are ...

α is a topology on X it is clear that the intersection $\bigcap T$ is a topology on X . The union $\bigcup T$ is in general not a topology on X : Let $X = \{a,b,c\}$. It is straightforward to check that $T_1 = \{X, \emptyset, \{a\}, \{a,b\}\}$ and $T_2 = \{X, \emptyset, \{b\}, \{a,b\}\}$ are topologies on X . Prerequisites: Algebra, basic analysis in \mathbb{R}^n , general topology, basic algebraic topology. Great writing as usual, with plenty of examples and diagrams where appropriate. Chapters 6 (Sard's Theorem) and 9 (Integral Curves and Flows) are a bit technical, and some of the exercises are quite hard.
