Cisco Software-Defined Networking automates, provisions, manages, and programs networks through software interfaces. SDN is an element of intent-based networking. With programmable networks, you gain new methods to interact with services via controllers and application program interfaces.

Software-Defined Networking (SDN) Definition - Cisco

Abstract: The emerging software defined networking (SDN) paradigm separates the data plane from the control plane and centralizes network control in an SDN controller. Applications interact with controllers to implement network services, such as network transport with quality of service. SDN facilitates the virtualization of network functions so that multiple virtual networks can operate over ...
