Thermochemistry deals with heat (energy) changes in chemical reactions. In chemical reactions heat is released or absorbed. If reaction absorbs heat then we call them endothermic reactions and if reaction release heat we call them exothermic reactions .

Thermochemistry investigates a chemical reaction from the aspect of heat changes that occur during the course of the reaction.

2.1 terms of heat energy changes, a chemical reaction can be classified as either exothermic (heat loss reaction) or endothermic (heat gain reaction). Question 1
